GuidingCare™ for Clinics

GuidingCare™ for Clinics is your answer to advancing health care quality and efficiency by improving health outcomes and reducing avoidable costs associated with patients at risk for or suffering from chronic illness.

GuidingCare for Clinics is a patient-centric chronic disease management system designed to meet the growing demands for better patient care, improved outcomes and increased health care quality for the chronically ill within the complex clinic environment.

The system allows you to track and manage populations and individual patients with multiple chronic illnesses during office visits or through post-visit communications and telephonic outreach. It's easy-to-use, affordable and simply the best, most advanced clinical information system available on the market today.

GuidingCare for Clinics Benefits

Easily integrates with your existing health information technology systems and captures valuable health information.

GuidingCare for Clinics creates a solid infrastructure to support data aggregation, clinical decision-making and reporting. The system is easy to implement and integrate with existing practice management (PM) and electronic medical records (EMR) systems, or can function as a stand alone product. Because the application is web-based you can be up and running in no time.

Identifies patients with chronic conditions, compliments your clinical workflow and helps reduce variations in care.

GuidingCare for Clinics uses algorithms driven by evidenced-based guidelines to automatically classify patients by level of severity. Clinical decision support tools compliment your clinical workflow and identify appropriate gaps in care and consistent opportunities to improve patient health.

Alerts clinicians to opportunities for care improvement and provides timely reminders to patients to seek appropriate care.

With *GuidingCare for Clinics* you can set automatic alerts to track and measure values for key health indicators. The flexibility of the system allows you to create your own disease categories and set parameters and input values for each group.

Coordinates care across multiple channels including face-to-face interactions and telephonic outreach.

In addition to point of care delivery, the system was designed to assist with telephonic outreach. It also generates automatic call lists, letters and emails through which you can reach out to patients. The more channels you utilize to reach out to patients, the greater the opportunity for health improvement.

Tracks entire populations and supports individual patient care planning.

GuidingCare for Clinics is well-equipped for reporting on entire populations to satisfy uniform data set (UDS) requirements, but it also allows clinicians to view patient-specific information. You can drill down to a specific opportunity-based care plan for each individual.

Why Altruista Health?

Altruista Health, Inc. is a leading provider of highly patient-centric and customizable total population care management technology and solutions used to streamline clinical and administrative processes, improve patient outcomes and reduce avoidable health care costs.
