

# CARE MANAGEMENT

---

## Streamline Clinical Workflows and Care Coordination

Altruista Health's GuidingCare® platform offers health plans and providers easy-to-use, next-generation data integration and workflow management tools. At the center of GuidingCare is the Care Management module, helping you operationalize an evidence-based, person-centered care management strategy for your populations. The highly configurable tool is integrated with sophisticated data analytics, workflow management, care coordination and reporting capabilities. Many of the same functions are also available in the Mobile Clinician app, enabling secure access from any mobile device on- or offline. Care Management enables your organization to address high-impact opportunities and maintain compliance every step of the way.

### **STREAMLINE CARE COORDINATION ACROSS THE SPECTRUM**

The Care Management module enables multi-disciplinary care teams within and across care settings to prioritize interventions, coordinate activities, communicate health status changes, close care gaps and improve outcomes.

### **AUTOMATE CARE & SERVICE PLANNING**

Powerful automation tools leverage a broad range of patient data – including risk scores, HRA and health screening results, and other patient touchpoints. With this data, you can proactively build and sustain a comprehensive care plan for each member.

### **SEAMLESSLY MANAGE CLINICAL & BEHAVIORAL HEALTH NEEDS**

As an integrated care and disease management platform, Care Management incorporates clinically valid care planning content for more than 30 common and atypical health conditions.

### **IDENTIFY & TARGET YOUR HIGH-RISK POPULATIONS**

Care Management integrates with GuidingSigns®, our sophisticated data analytics and decision support engine that identifies and stratifies members by expected risk. This supports highly targeted intervention programs.

# CARE MANAGEMENT

## Seamlessly Link Analytics with Care Plans

GuidingSigns® Analytics is our clinical decision-support system, transforming data into actionable insights that support care managers in making informed decisions. GuidingSigns is extensively integrated with the Care Management module to deliver risk-scoring, stratification and gaps-in-care analysis. Corresponding service and education interventions directly populate relevant fields and automate patient-specific care plans. All of this works to deliver the right care, to the right members, at the right time.
